

USB-CRF4 Kit PC KIT FOR LOCAL MANAGEMENT

- Bidirectional connection with the transponders for local management
- Quick set of the main communication parameters
- Reading out identification data

GENERAL DESCRIPTION

The kit contains a local control software for NMT-COMx transponders and a special USB cable. The kit allows to switch on and off the frequency scanning, to set the downstream frequency to a desired value, to set the upstream transmitter level and the IP address and to read out the MAC address and the temperature. All these serve the fast and easy system start in case of non-automatized HMS network.
